

COSTA RICA BUTTERFLIES

There are an incredible 3000 species of butterflies in Costa Rica. Every day when you go for a walk you will see them. Impossible not to notice their beauty. I have tried to identify a few but am afraid I will need a three-year course to get it right. Let me know if you are able to identify some.

They here because they are beautiful!

Hope you have enjoyed these beautiful photos. I read that Costa Rica, a tiny country has over 18% of the world's butterflies. Costa Rica is doing a good job of preservation. The butterflies need the natural habitat so let us hope their future is secured.

Terry
